13. ABSI conferences in last three years – None

Last ABSICON I attended in 2016 where presented three papers myself and was co-author in other three as well.

14. Contribution towards ABSI

During my MCH I have worked on the data of breast cancer of approximately 2500 patients under guidance of Prof SVS Deo. We analyzed the data in best scientific manner and presented it and published it at various national and international platforms. This was an analysis of retrospective data of past 20 years maintained at IRCH-AIIMS. This exercise helped me to know how our Indian cancer patients are responding to standard treatment and what are the different patterns of failure? This analysis developed a great vision to take treatment decisions for our own patients. Unfortunately I was not able to attend last few conferences because of my new institutional commitments and covid 19 pandemic. Now in southern Rajasthan we are doing excellent job for breast cancer care. Presently we are doing two post graduate thesis related to breast cancer under my supervision and soon we will send the results for presentation and publication. I further want to promote excellent breast cancer care services in my area. The next aim is teaching and research in field of breast cancer. This year we got the approval to start MCh surgical oncology course at our institution that will further add research opportunities and academics. Being the leading association ABSI has provided a great platform to all the people working in this field and by taking additional responsibility I want to add my contribution to the great association. I further want to start some collaborative work for breast cancer care in southern Rajasthan under guidance of ABSI to promote research and breast cancer care. I hope being a committee member I will be able to take association towards newer horizons.
